Ideation Phase
Empathize & Discover

Date	31 January 2025
Team ID	PNT20222TMID00001
Project Name	Machine Learning BAsed Hypertension risk prediction
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

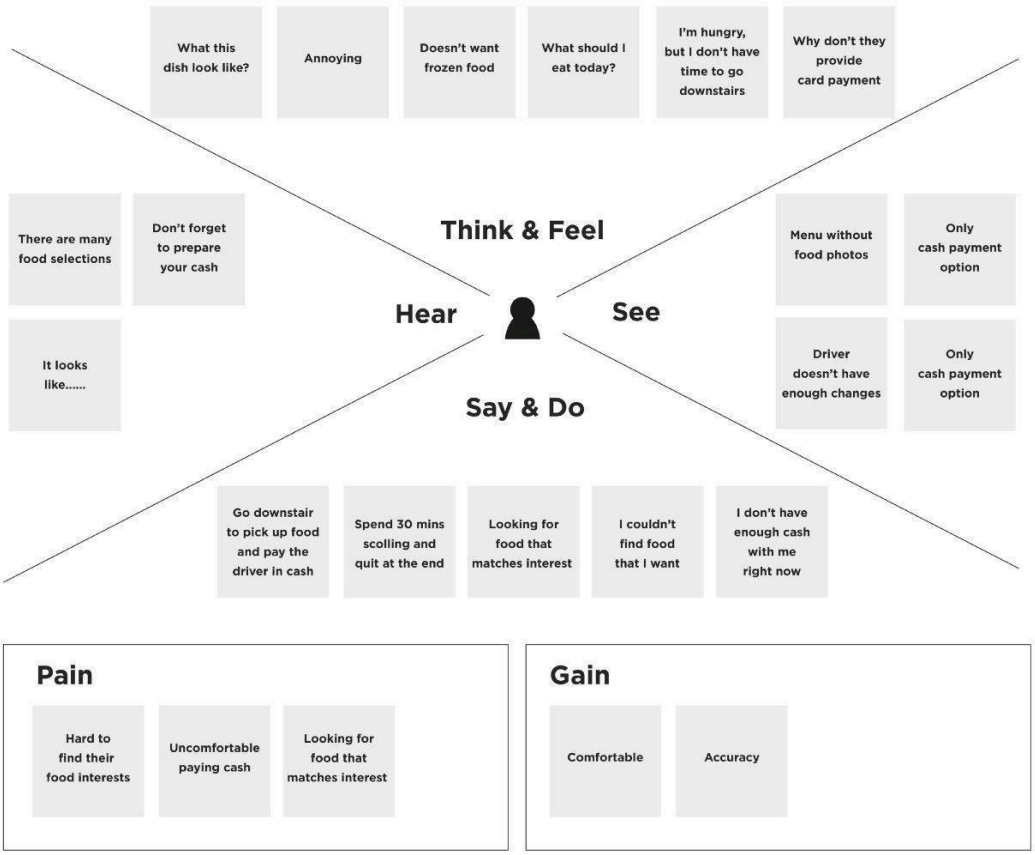
Example: Food Ordering & Delivery Application



Empathy Map Canvas

USER

Healthcare Professionals / Medical Researchers / Hospital Data Analysts

———

THINK & FEEL

• Concerned about the rising number of hypertension cases
• Wants reliable tools to analyze healthcare data quickly
• Feels frustrated with messy and incomplete patient datasets
• Wants accurate insights that can help improve patient outcomes
• Interested in data-driven decision making in healthcare

———

SEE

• Large datasets of patient medical records
• Data with missing values and inconsistent formats
• Limited tools available for easy healthcare data analysis
• Increasing need for predictive healthcare technologies

———

SAY & DO

• Says that manual data analysis is time-consuming
• Discusses the need for automated tools for healthcare analytics
• Uses spreadsheets or basic software for data analysis
• Uploads datasets and looks for patterns in patient health data
• Collaborates with other healthcare professionals for research

———

HEAR

• Recommendations from other healthcare professionals
• Discussions about AI and machine learning in healthcare
• Advice from hospital administrators about improving patient care
• Feedback from researchers about the importance of data accuracy

———

PAIN

• Poor quality healthcare datasets
• Missing or inconsistent patient records
• Time-consuming manual data preprocessing
• Lack of easy-to-use healthcare data analysis tools
• Difficulty identifying patterns in large datasets

———

GAIN

• Faster data cleaning and preprocessing
• Automated insights from healthcare data
• Accurate hypertension prediction results
• Better decision making in patient treatment
• Improved efficiency in healthcare data analysis
